

TOUR

SYSTEMS FOR CIRCULAR
AND RECTANGULAR PIVOT WINDOWS

Open, Close, Live

How I do envy...

A porthole window and the sophisticated choice of those who love precious and exclusive things, of those who wish to assert their own personality in a clear and definite way.

...those who live life to the full!

A large pivot window is the symbol of those who open their own world to light, of those who like enjoying wide horizons, of those chasing the subtle pleasure of asserting their freedom.

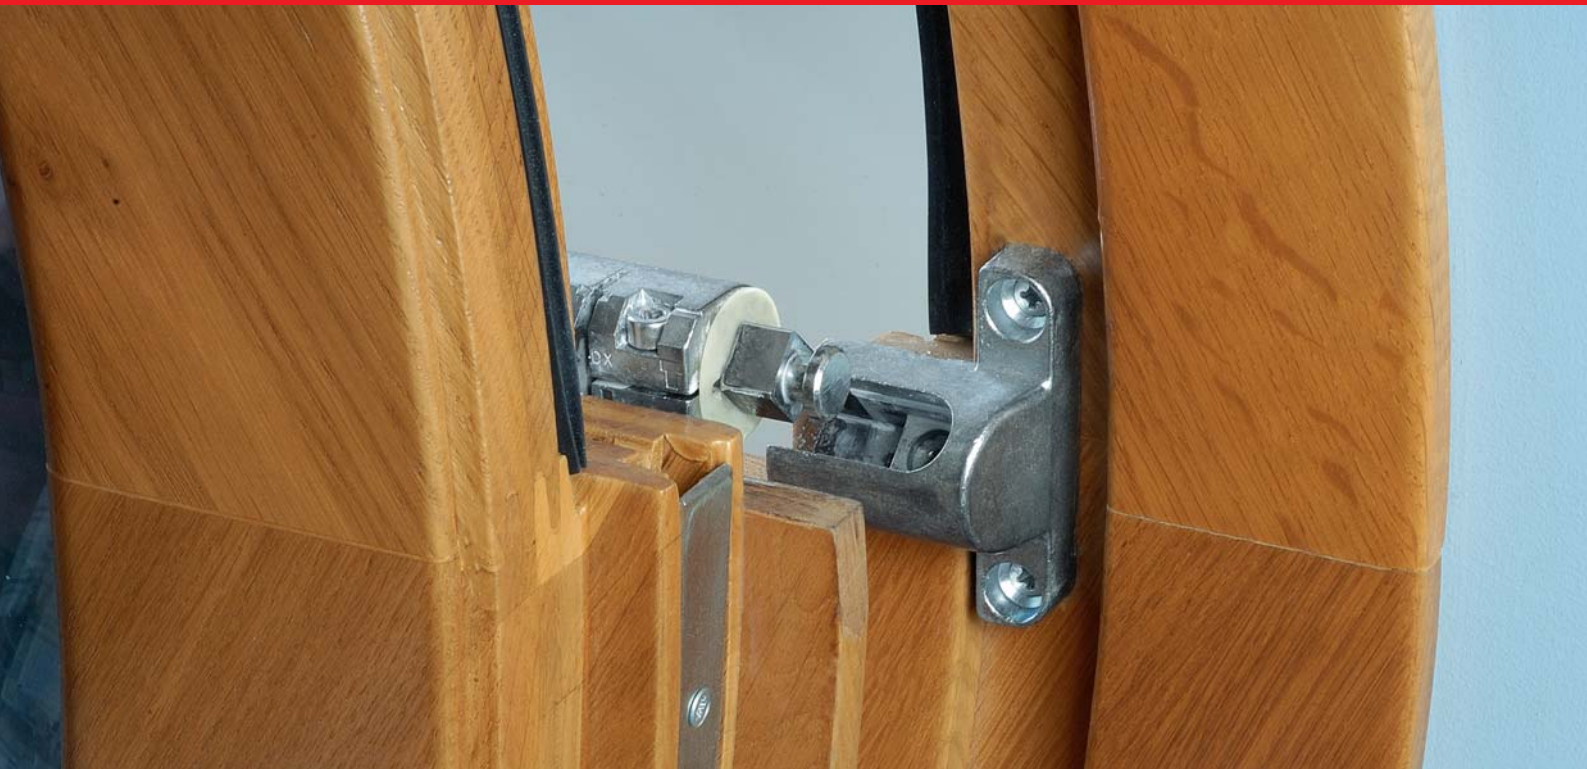

T*^Q*our System for circular and rectangular pivot windows

The challenge AGB wanted to address by designing Tour was industrializing a system which is fascinating but technically demanding and making it more functional and easy to manage. Nowadays Tour is the most advanced system for pivot windows. The innovative design choices applied to Tour make it unique for quality and convenience.

Circular pivot windows

The first gap 12 system

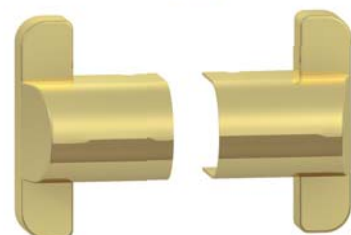

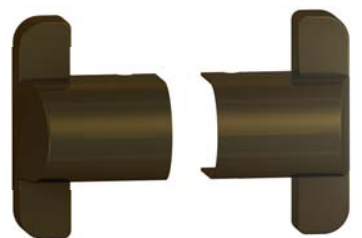

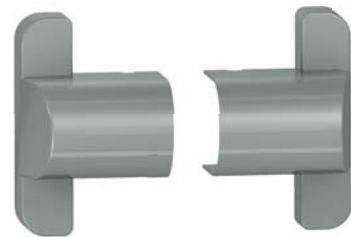

Hinge blocking

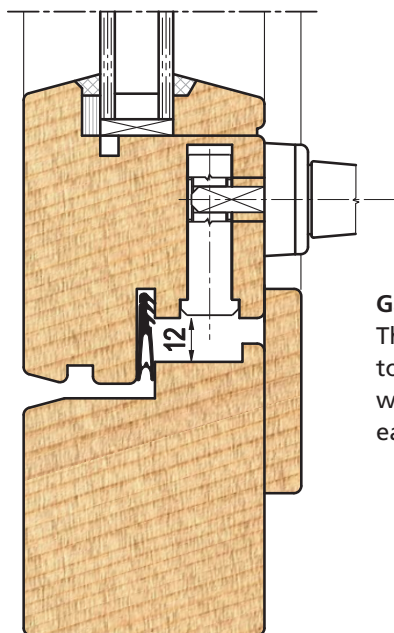

The hinge friction is easy to reach and adjust thanks to the Allen wrench.

Independent and friction hinges

The hinges are equipped with friction and independent from the movement transmission, therefore they do not require any milling on the sash nor or the frame. Moreover, a rapid coupling system makes it possible to assemble and disassemble the movable sash without removing the hinge.

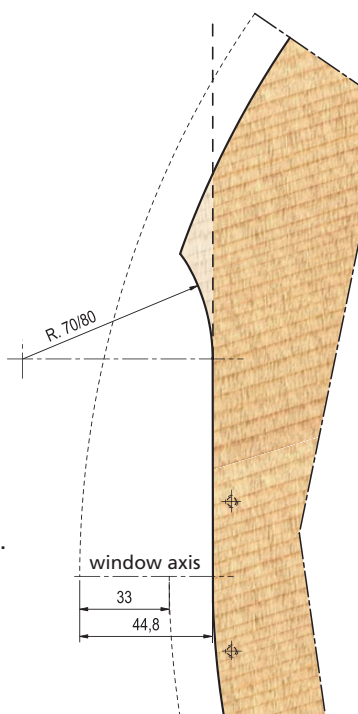

The covers are available in several colours.

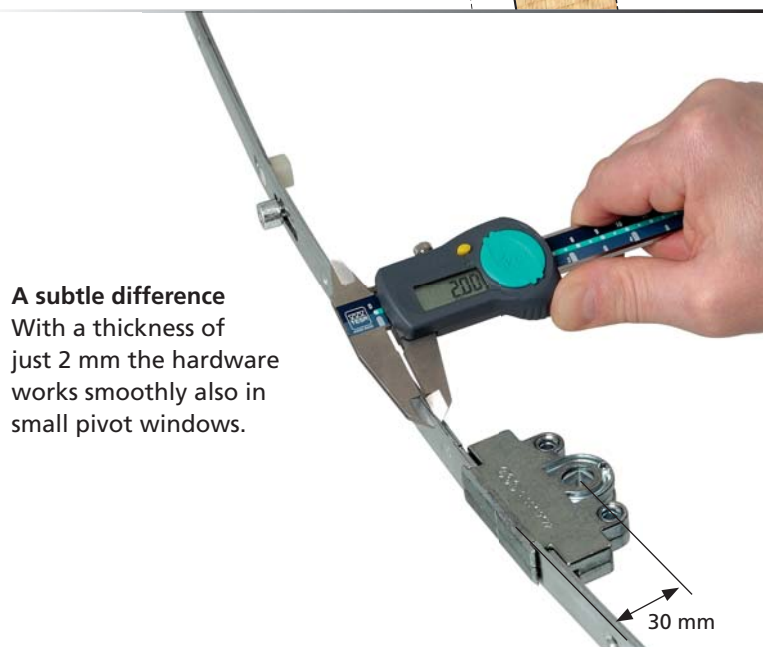

Gap 12

Thanks to Tour it is possible to realize also gap 12 pivot windows which are thus easier and quicker to make.

The milling for the transmission of the movement to the upper part takes just a moment.

A subtle difference

With a thickness of just 2 mm the hardware works smoothly also in small pivot windows.

The 30 mm backset avoids the contact between the handle and the frame staff bead thus offering great freedom when choosing the handle and easy opening/closing operations.

Easy cleaning

The window turns of 180° to make the outside glass easy to clean.

Adjustment of the friction on the hinge

The hinge friction and the opening limiting device are easy to reach and adjust.

Friction hinges

Three models of friction hinges are available:

- with 30 mm rebate, 200 kg loading capacity
- with 35 mm rebate, 200 kg loading capacity
- with 40 mm rebate, 300 kg loading capacity.

More effective microventilation

The closing strikers leave complete freedom when choosing the handle and ensure a wider opening for really effective microventilation.

Easy cleaning

By unlocking the limiting striker with the wrench provided, the window rotates of 180° making the outside glass easier to clean.
