HOSPITALITY

Security and design in a single solution

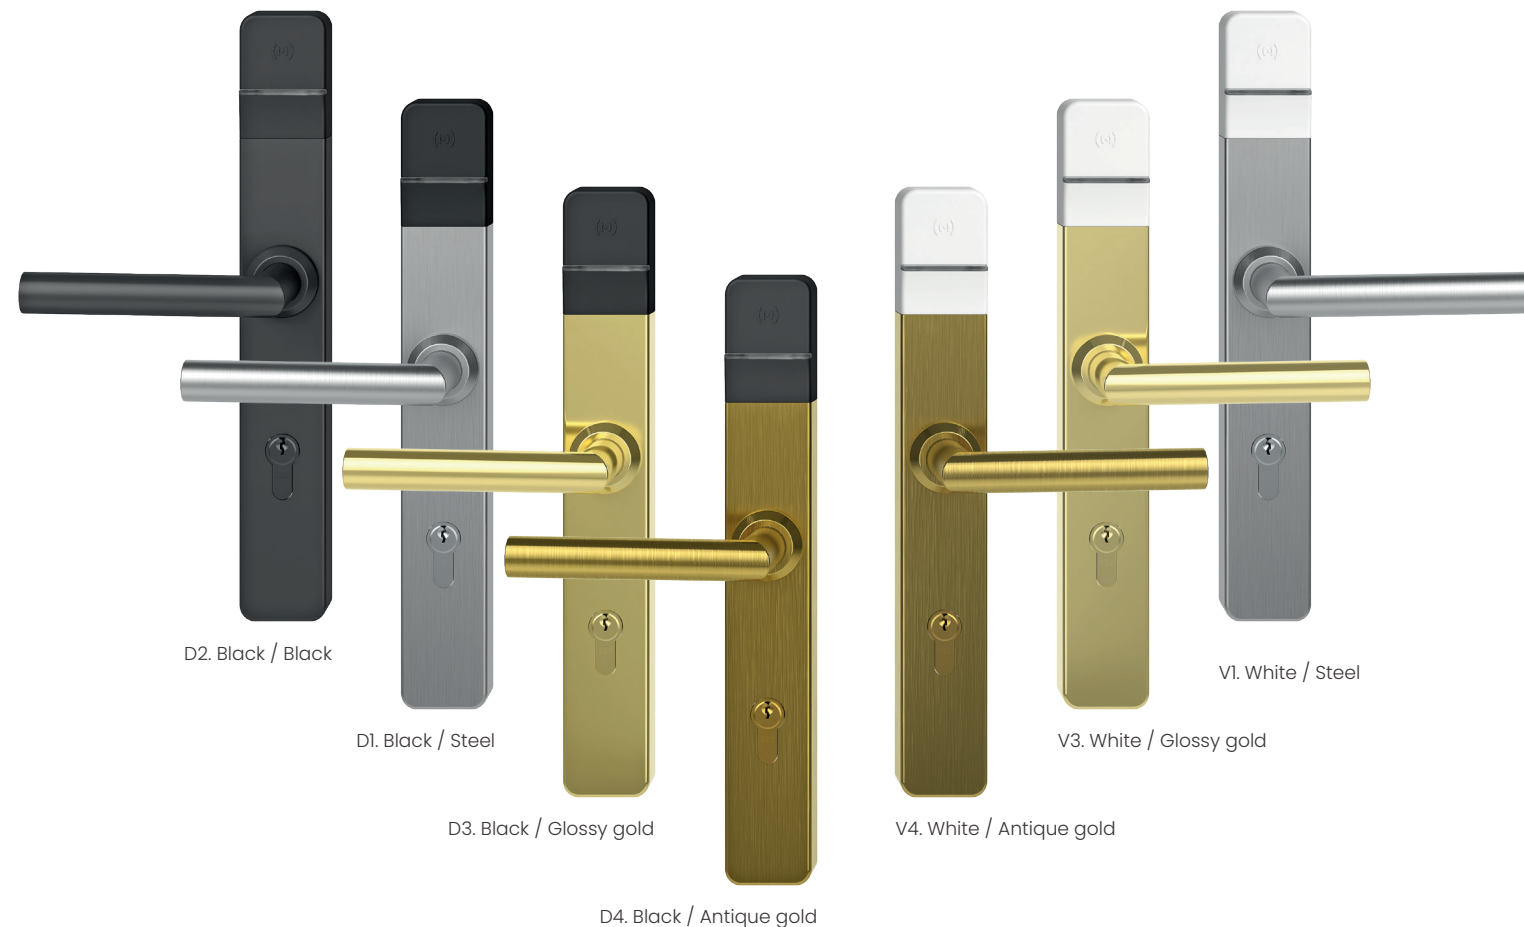

Domia Stilo is the electronic handle that combines elegance and innovation. Thanks to its slim profile and concealed fixing system, it blends perfectly into any setting — from new doors to existing ones — without invasive work, allowing the reuse of the lock already installed.

Two-colour (green and red) optical indicator enhances the user experience, while security is ensured by a solid anti-drill protection. The concealed fixing screws provide a smooth and clean design, for a premium look and overall security.

Behind its sleek, minimalist design lies a technological core. Domia Stilo supports smart credentials (RFID badge, smartphone, link). It can be configured as a standalone solution or online, integrated into wireless access control systems that use the existing Wi-Fi network. Domia Stilo is flexibly managed by the Accexi cloud platform, providing advanced, secure, and always up-to-date management.
