Opera iControl special function

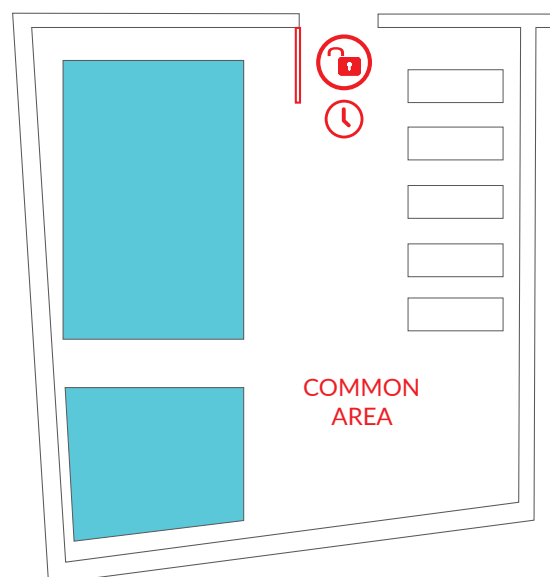

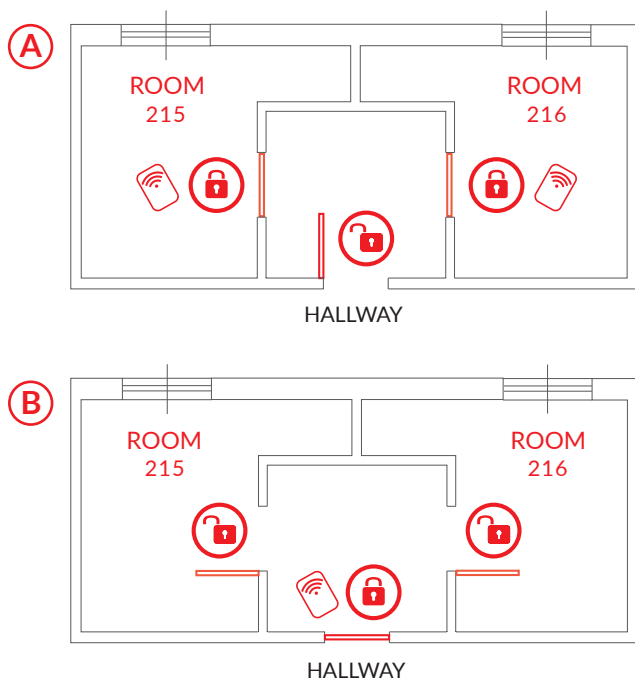

The Lock offers a big flexibility of use thanks to the remote management

Two communicating rooms could be sold individually (A) or as a single room (B)

Thanks to “always open” special function the access control manager can change the status of the door between the rooms without the intervention of the staff.

Automated access management for services and common areas

Thanks to the special functions Opera iControl allow the remote management of the door status (timed too), without sacrificing the comfort of the guests.

Advantage of iControl lock with “always open” function

iControl consumes less than 0.002 Wh each time the door is open. the electrical bulb, kept electrically open, needs more than 3W, always.

iControl doesn't use electricity if the door is not opened, so it doesn't heat itself. The electrical bulb, kept electrically open, can reach 60°C in few minutes.

iControl guarantee the maximum noiselessness when the door is close because it allows the correct pressing on the seals. The electrical bulb, kept electronically open, can not fully press the seals.
